## VeDiS-II Yearly Update Project (YUP) Software

Software releases monthly for VeDiS-II EURO PRO YUP 2012 / VeDiS-II ASIAN PRO YUP 2012 YUP customers, please get the updates from website.

## Technical Guidance

### **BMW F10 EMF (Electro-mechanical parking brake system) Removing and installing electronic parking brake pads**

#### **1. BMW EMF Introduction**

BMW F10 is equipped with an electromechanical parking brake integrated in the brake calliper to instead of traditional hand brake.

The advantage of model equipped with EMF:

1. Reliable application and release of the electromechanical parking brake (EMF) under all conditions.
2. Operation on a EMF button and no need additional storage space for parking brake lever in the area of the center console.
3. Dynamic emergency braking function also at low friction ensured by the control systems (ABS)

#### **2. Function of removing and installing electronic parking brake pads**

To change the brake pads, the EMF actuator must be in the fully opened position so that the brake piston can be pushed back. The BMW diagnosis system can be used to trigger the EMF actuators and assume the fully opened position. This position is necessary to change the brake pads. Installation mode is set automatically on reaching the installation position.

Due to safety reasons, the parking brake cannot be activated for as long as the EMF

control unit is in installation mode. The EMF indicator lamp in the instrument cluster will flash yellow if the EMF is pulled.

After being changed, the parking brake pads must be fitted. This is necessary to ensure the brake pad and brake disc pairing assumes the specified friction parameters. Only then will the required braking force be reached.

### How to perform this function utilizing iScan-II wt

- Select Vehicle Diagnostic → EUROPEAN

- Select BMW → BMW Diag

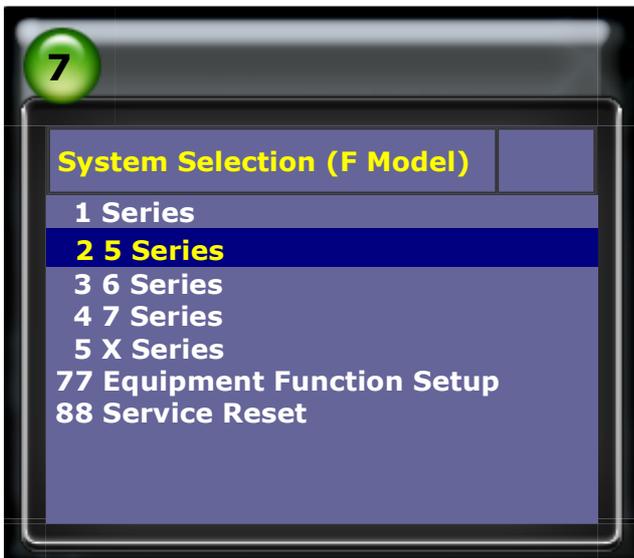

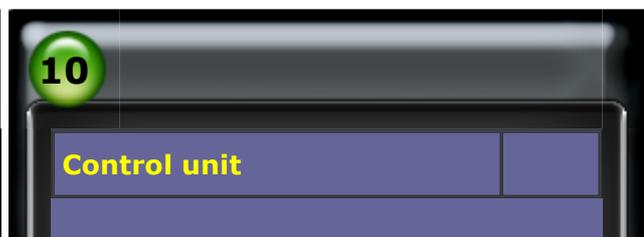

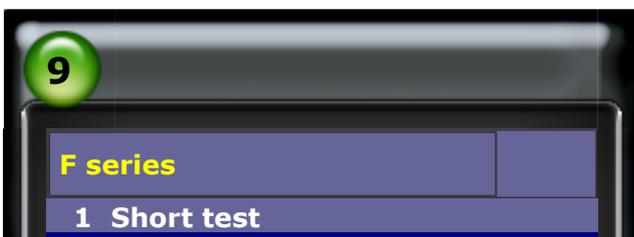

• Select F Series->BMW Diag F Series 2011.12 USEN

• Select 5 Series → F10/F11

• Select Control unit-> Chassis

## 2 Control unit

- 1 Drive
- 2 Chassis**
- 3 Body
- 4 communication & information
- 5 Air Conditioning

### • Select DSC

Brake-pad wear, rear axle:  
replace  
brake pads

To set EMF in installation mode for changing parking brake pads.

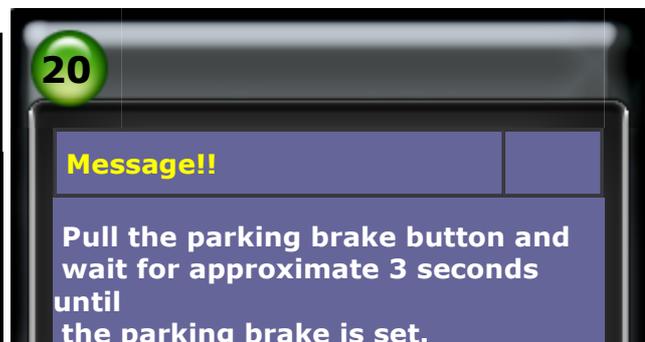

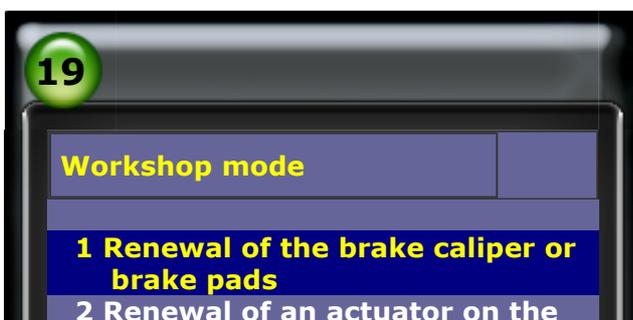

- Select 77 Equipment Function Setup->Parking brake

- Select Workshop mode into installation mode

- Select Renewal of the brake caliper or brake pads

brake caliper

The setting of the parking brake is audible.

Press ENTER to continue

21

**Message!!**

Next, the parking brake is released. To do this, activate the footbrake and press the parking brake button. Releasing of the parking brake takes approximate 3 seconds and is audible.

Press ENTER to continue

22

**Message!!**

In the next step, diagnostics are used to check whether both actuators of the parking brake are released."

Press ENTER to continue

23

**Message!!**

The 'released' state of the parking brake was identified correctly. In the next step, the parking brake is moved to the installation position and the mounting mode is activated. Approximate 5 seconds are needed to reach the installation position.

24

**Note!!**

When the installation mode is activated, the parking brake button is deactivated. The parking brake function via the parking brake button is not available in this case. To deactivate the installation mode, the parking brake must be started up.

Press ENTER to continue

- When the EMF control unit is in installation mode, the EMF indicator lamp in the instrument cluster will flash yellow if the EMF is pulled. To ensure the parking brake is in the installation position, please switch off ignition and follow the instruction to change the brake pads.

25

**Message!!**

26

**Note!!**

The installation position of the brake caliper actuator was reached. The installation mode is activated. Switch off ignition. Subsequently, a waiting time of at least 30 seconds must be adhered to until the plug connections on the actuator can be detached.

Press ENTER to continue

The parking brake is in the installation position. Switch off ignition. The brake calipers and the brake pads can now be renewed according to instructions.

Note: To deactivate the installation mode, the parking brake must be started up.

Press EXIT to break

• Select Start-up

27

Parking brake

- 1 F10/F11
- 2 F18

28

Parking brake

- 1 Workshop mode
- 2 Startup

29

Message!!

The park brake is started up using this service function. The parking brake is started up by repeatedly releasing and setting the parking brake by activating the parking brake button. Start-up must be conducted in the following cases:

- Renewal of the parking brake control unit
- Renewal of the parking brake actuators
- Renewal of the parking brake button
- Renewal of the brake caliper or the brake pads of the rear axle

The ignition must be switched on during start-up.

30

Message!!

Press ENTER to continue

31

**Message!!**

The installation mode is deactivated at the beginning of the start-up procedure.

Press ENTER to continue

32

**Message!!**

The parking brake must be released at the beginning of the start-up procedure.

To do this, activate the footbrake and press the parking brake button.

Release of parking brake takes approximate 3 seconds and is audible.

Press ENTER to continue

33

**Message!!**

Set the parking brake. Pull the parking brake button and wait for approximate 3 seconds until the parking brake is set. The setting of the parking brake is audible.

Press ENTER to continue

34

**Message!!**

Release the parking brake again.

To do this, activate the footbrake and press the parking brake button.

Release of parking brake takes approximate 3 seconds and is audible.

Press ENTER to continue

35

**Message!!**

The parking brake has been started up successfully.  
Note: After the brake caliper or brake pads of the rear axle are renewed, the parking brake will not function properly until after it has been activated a number of times.

Press EXIT to break

To do service reset via CBS when the service life of rear axle brake pad is due, and make

sure the brake pad sensor has been replaced before service reset.

- Select Service Reset -> CBS F10/F11
