1. Select [Commodore]>[VZ]>[V6]

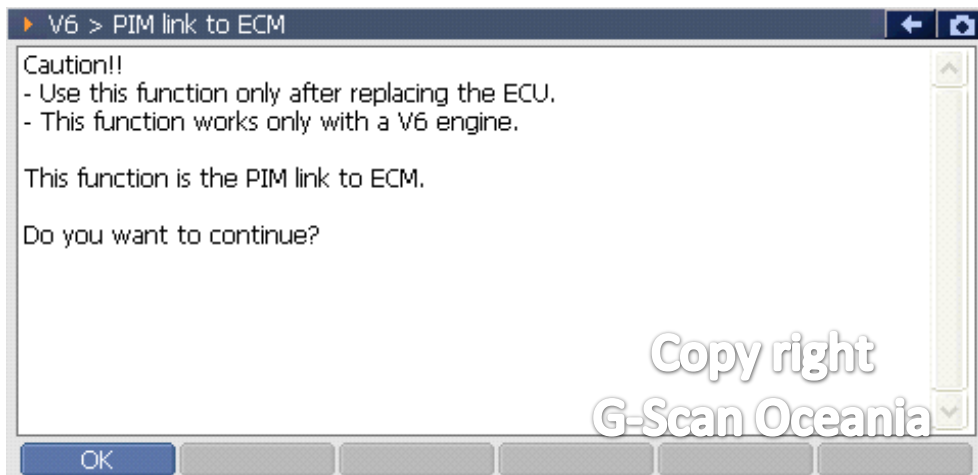

2. Select [Special function]

3. Select [PIM link to ECM]

4. Caution

```
▶ V6 > PIM link to ECM                                    ← 📷

Caution!!
- Use this function only after replacing the ECU.
- This function works only with a V6 engine.

This function is the PIM link to ECM.

Do you want to continue?

        OK
```
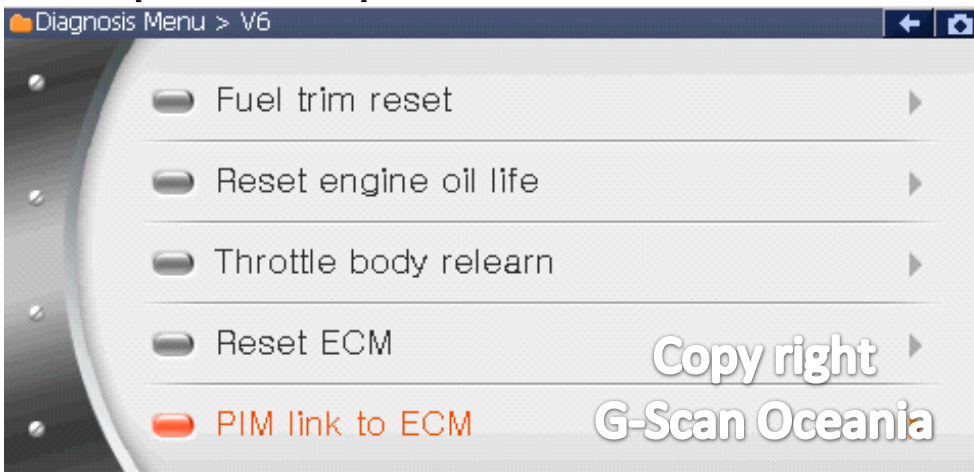

5. Input the security code.

```
▶ V6 > PIM link to ECM                                    ← 📷

Input security code(4-digit number) :
                                        ┌─────┬─────┬─────┐
                                        │  1  │  2  │  3  │
                                        ├─────┼─────┼─────┤
                                        │  4  │  5  │  6  │
                                        ├─────┼─────┼─────┤
                                        │  7  │  8  │  9  │
                                        ├─────┼─────┼─────┤
                                        │ <-  │  0  │Enter│
                                        └─────┴─────┴─────┘

       OK         Cancel
```
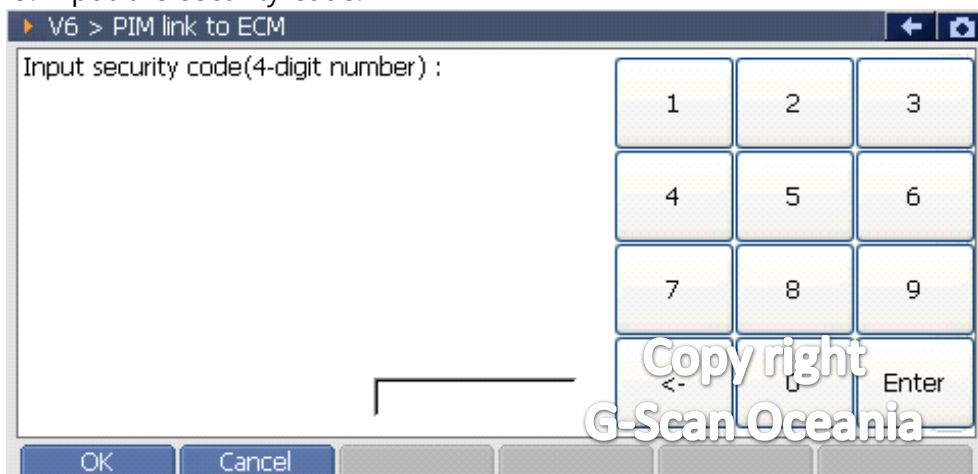

** You must input the correct 4 digit security number.

6. In progress.

```
▶ V6 > PIM link to ECM                                    ← 📷

In Progress
                ┌──────────────────────────┐
                │                          │
                │            ✳             │
                │       Connecting......    │
                │                          │
                └──────────────────────────┘
                                                      er

       OK         Cancel
```
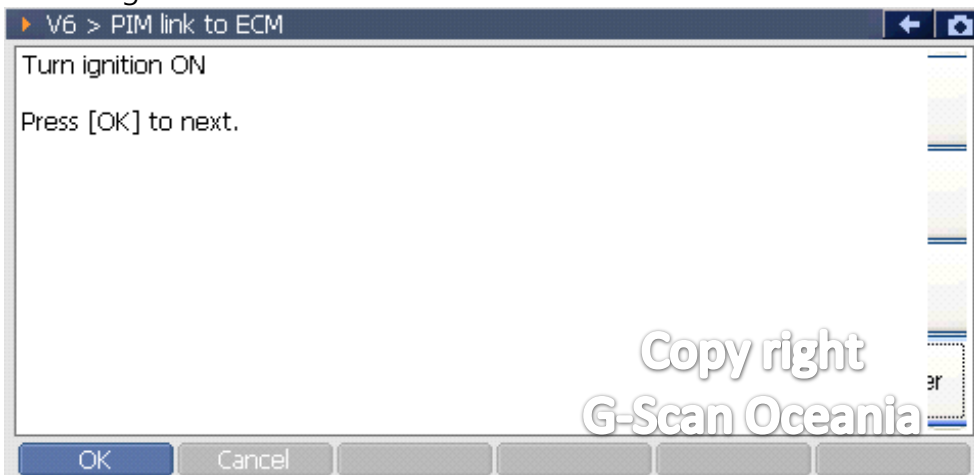

** If it shows a message regarding a communication failure,
Try turning ignition off -> on, and then recommunicating with the engine system.

7. Turn ignition off

```
▶ V6 > PIM link to ECM                          ← 📷
Turn ignition off.

Press [OK] to next.

                                    Copy right
                                  G-Scan Oceania      er

   OK        Cancel
```

8. Turn ignition on

```
▶ V6 > PIM link to ECM                          ← 📷
Turn ignition ON

Press [OK] to next.

                                    Copy right
                                  G-Scan Oceania      er

   OK        Cancel
```
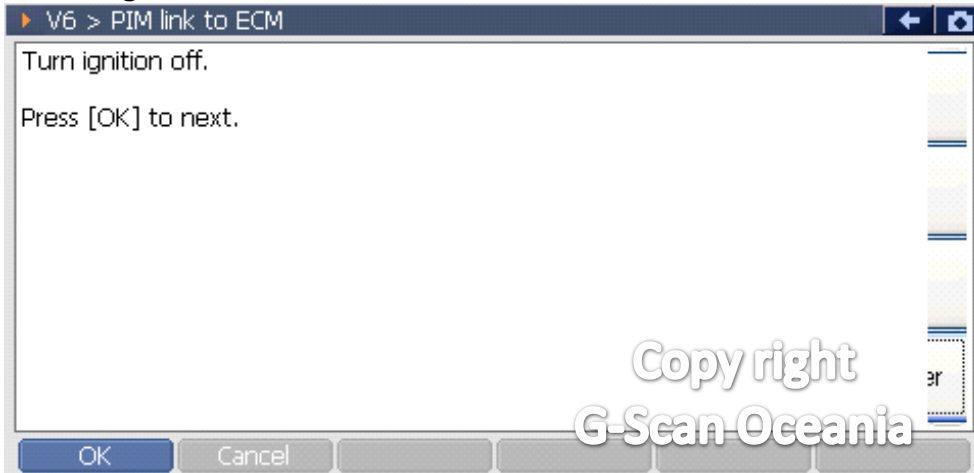

7. Complete.

** Engine will now start again. And any remaining DTC's relating to communication with other modules can be erased.
